

ALUMINIUM RECYCLING

A STRATEGIC PILLAR FOR EUROPE'S CIRCULAR ECONOMY

Recycling requires only 5% of the energy used for primary production.

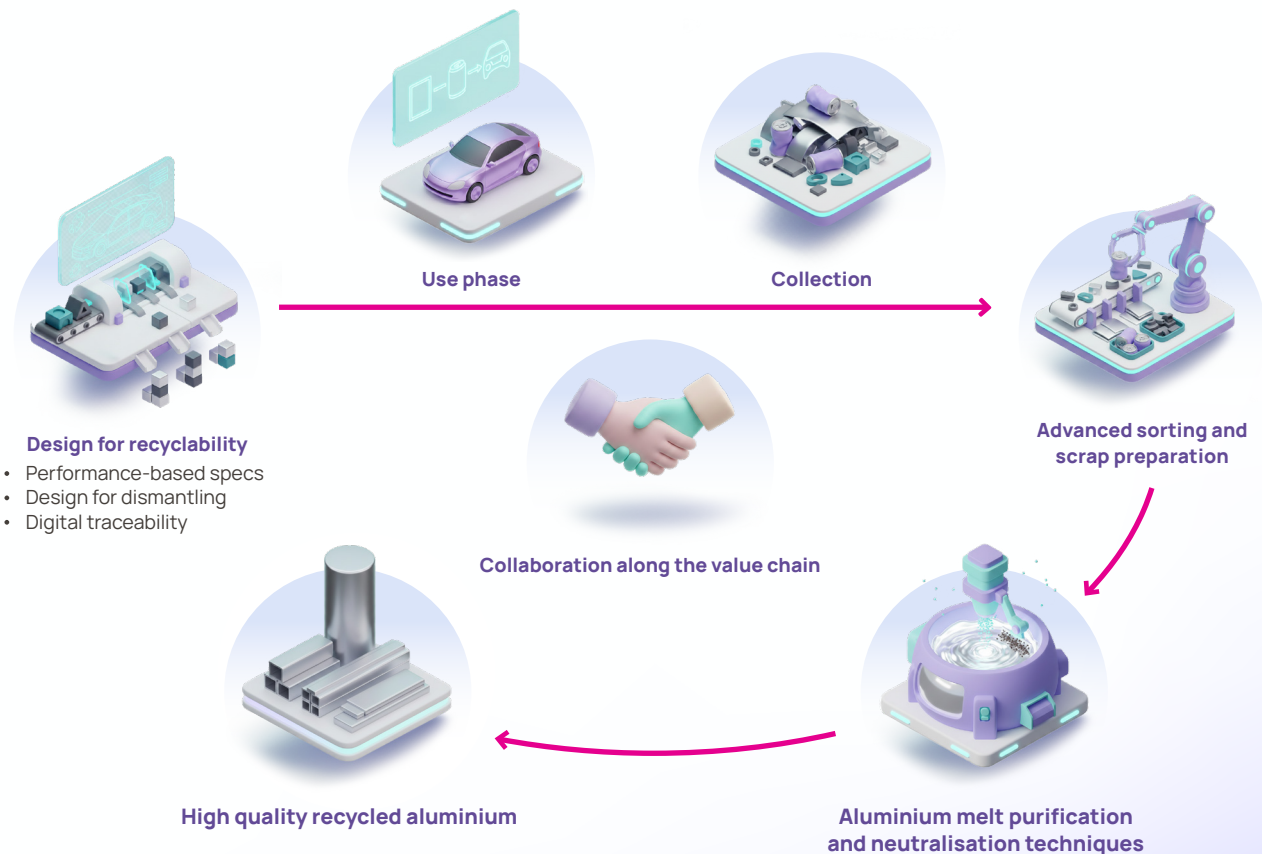

Aluminium can be recycled repeatedly without any loss of its material properties.

Currently, recycled aluminium already meets 60% of Europe's internal demand.

ADVANCING CIRCULARITY

Scaling R&I for Enhanced Recycling

WHAT ENABLES THIS SHIFT IN EUROPE?

Ensure high-quality scrap is retained and processed within the EU.

Shift toward holistic frameworks that address structural costs to ensure the entire circular supply chain remains profitable and commercially attractive across all sectors.

De-risk private and public investment, bridging the gap between pilot projects and full-scale industrial deployment.
